- product is delivered directly to sifter screen
- sealed with dust-tight membrane
- full access for cleaning, dismantling and changing screen

- STC designed to suit type and size of sifter
- Surface finishing/treatments as required

# TEKEMAS

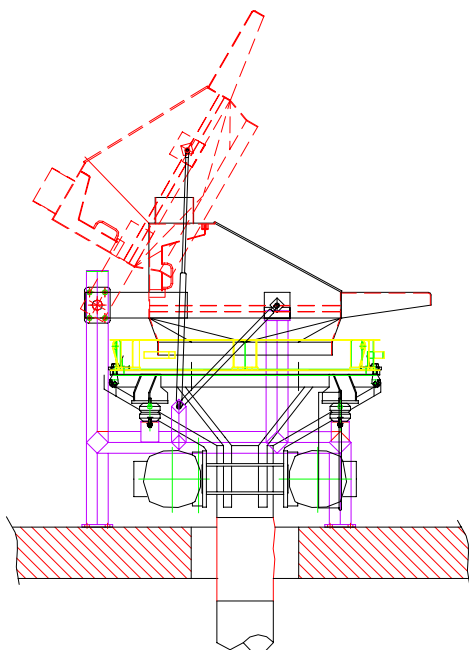

### *Sack-tip cabinet with integrated sifter*

The sack-tip cabinet and ALLGAIER vibrating sifter solution from TEKEMAS is ideal for applications requiring frequent product changes and cleaning. The outlet of the sack-tip cabinet is sealed to the sifter with a dust-tight membrane and delivers product directly onto the sifter screen. The product in the required grade passes through the screen to the next equipment in the line, such as a vacuum conveying system or a mixer. The remaining product is discharged via the oversized outlet.

### *Easy cleaning*

During cleaning, the sack-tip cabinet can easily be rotated away from the sifter allowing full access for dismantling and changing the screen. The system is suitable for being fully washed down.

*Information may be subject to change without notice.*
